

ROIconnect

Access for medical research studies

March 2026

ROIconnect for Research Studies

Study Requirements

1. Current IRB with future expiration date
2. List of external reviewers who should be associated to the study
3. Patient MRNs to be added to study

Epic Setup

1. Study context (5xxxx)
2. User accounts
 1. Users are attached to study context
3. Patient list (3xxxx)

Need Help? Please use the form below. Thanks!

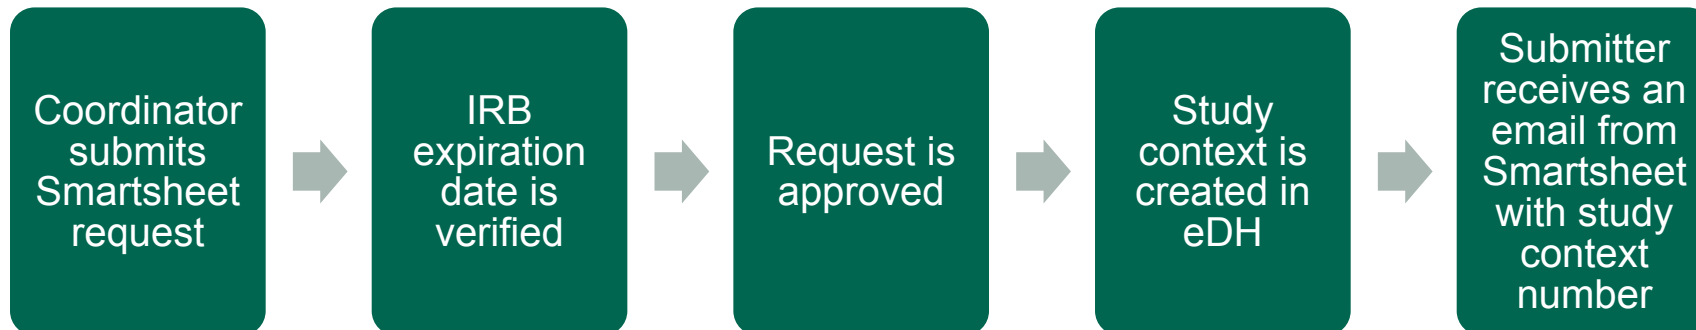

Escalation Request

Use this form to request an update or escalation. This form will notify management and allow us to track all requests in one place.

Initial Study Request

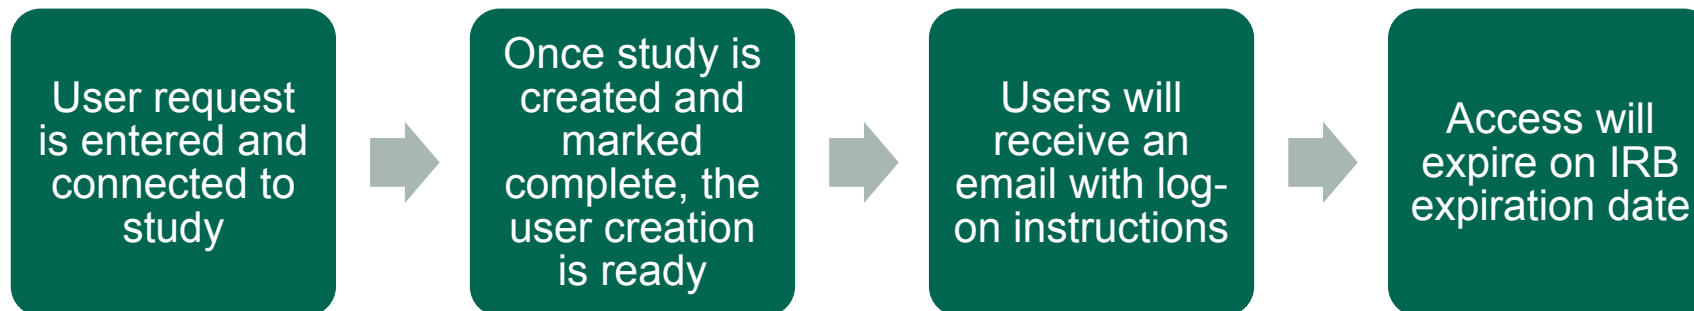

- We need a current IRB so we can have a current expiration date. This drives the expiration date for to the user access and the patient on the list.

User access request

- Enter a separate request for each user. We use the IRB number to connect the user to the site context so this must be entered fully.
- Brand new users get an IAM email and a Smartsheet email. Returning users (or additional studies) will only get the Smartsheet email.
- There is only one access expiration date – we try to track and keep it to the last date.

Patient Lists

- You will need the study context to connect patients to studies (5xxxx)
- Please submit patient lists in an excel sheet with MRN and patient name. This allows us to cut and paste into the eDH form.
- Future state: Coordinators will have access in eDH to maintain patient lists

Study Renewal

- Renewal reminders will go out 4 weeks before expiration
- A final reminder will go out 2 weeks before expiration
- Attach the updated IRB to the Smartsheet request and enter the new end date and the study, the users, and the patients are all manually updated.

Denied Request

- I will try to email submitter first
- If I am unable to manage through email, I will deny the request and the submitter can edit in the Accounts Dynamic View
